Quick Guide

SMT-5

SMT-5 Satellite Speaker

INTRODUCTION:

Thank you for your choice in purchasing our loudspeakers. The SMT-5 is one of our smallest satellite speaker designed by MODVO, a manufacturer that specialize in building compact loudspeakers.

The SMT-5 speaker adds great build quality and solid sound at a affordable price. This compact monitor speaker adds accurate sound quality that is not heard of in a speaker this size and price.

PREPARING THE SPEAKERS:

Please read this entire manual before making any connections. Follow the steps below.

1. Before you hook-up your speakers, make sure your receiver/amplifier is powered off. Once your amplifier is off, you can begin hooking up you speakers to the amp.

There are two terminals on the rear of each satellite speaker, one red positive (+) and the other black negative (-). The positive terminal of you speaker should be connected to the positive lead of your amplifier / receiver and negative terminal to the negative lead (as shown below). If you are going to use these speakers as main (front speakers) speakers on a 5.1 or 7.1 receiver, make sure they are connect to the front speaker leads (FT or front L/R) as labeled on your receiver.

SETUP

The SMT-5 is one of our smallest satellite speaker designed by Modvo, business that specialize in building compact loudspeakers.

SPEAKER MAINTENANCE

For the life of your speakers, we recommend using reasonable power and volume level. These speakers are designed to be used with amplifiers with a maximum power of 100 watts per channel. To prevent burn-out or damage to the drivers, avoid setting bass level on max, half way is more reasonable for a speaker this size. This will prevent the speakers from clipping and bottoming out at high level of sound.

CABINET MAINTENANCE

The speaker cabinets should be treated the same way as a piece of furniture. Each speaker cabinet is finished in a gloss paint, which does not require any special cleaning. A simple lint-free cloth will work fine for cleaning. Do not use any liquid chemicals to

Trouble Shooting

Below is a list of trouble shooting problems with answers, should any problems occur doing the setup of your speakers.

1. No sound?

Answer: Make sure your speaker wire is properly inserted into your terminals. Also check to see if the speaker cable wire is touching the metal contact of your speakers binding post terminals

2. Only one speaker has sound?

Answer: make sure each speaker is plug into the left and right terminals of your amplifier.

Note:

Make sure the balance control of your stereo / amplifier is set in the center, if it is not, only one speaker will have sound or one speaker may have more volume then the other.
